Superior cleaning technology

AgroClean CIP Detergents are formulated to handle tough cleaning conditions in modern dairies, making them the first choice for producers who need confidence that their equipment is thoroughly and efficiently cleaned. The phosphate-free, non-foaming formula contains a unique Poly-TEC blend which enhances emulsification, stabilizes chlorine, and includes scale inhibitors, and rinse aids, to leave your system sparkling clean.

- **Incorporates Poly-TEC polymer technology** for superior emulsification with less alkalinity and chlorine than detergents that rely primarily on alkalinity.
- **Special rinse additives** promote rapid and clean sheeting of water off surfaces.
- **Chelating agents** bind metallic salts for efficiency in hard water conditions.
